TITLE: Unsatd. polyester resin board prodn. - by
laminating an epoxy! resin laminated prepreg on a curable
unsatd. polyester resin layer, curing and moulding the
laminate

PATENT-ASSIGNEE: MATSUSHITA ELECTRIC WORKS LTD [MATW]

ABSTRACTED-PUB-NO: JP 54120675A

BASIC-ABSTRACT:

Prodn. of unsatd. polyester resin boards comprises laminating an
epoxy resin
impregnated prepreg. on ≥ 1 side of an unsatd. polyester resin
layer which
cures by light irradiation and/or heating to form a laminate and
irradiating
the resin layer with light through the prepreg. after which heating
and
moulding the laminate. Specifically a Cu foil, film forming material
is
overlaid on the epoxy resin impregnated prepreg. and heated.

The polyester layer is produced from e.g. 100 pts. (wt.) of an
unsatd.
polyester resin, 5-50 pts. of a crosslinking agent, 0-2 pts. of a
light
polymerisation initiator, 1-100 pts. of a thermal polymerisation
initiator,

0.01-1 pt. of a thermal polymerisation inhibitor, 0-500 pts. of filler(s) and 0-500 pts. of reinforcing material(s). The thickness is pref. 0.5-5 mm. The light polymerisation is pref. conducted by UV irradiation or 10 sec. to 10 min. The resin in the polyester layer changes to B-stage.
